ZEFFRON

Website SEO Audit

What is working, what is broken, and what we need to fix

Site audited:
zeffron.ai
Audit date: 18 March 2026
Source: SEOptimer third-party audit tool + live page source code inspection
Pages covered: 6 pages (Homepage, Blog Index, 2 Blog Posts, Live Lab, Careers)

Please add your name, decision, and deadline to the action table in Section 5.

1. Quick Context — What Is SEO and Why Does It Matter for Zeffron?

💡 This section is for anyone on the team who is not familiar with SEO. Feel free to skip to Section 2 if you already know the basics.

SEO stands for Search Engine Optimisation. In plain terms, it is everything we do to make sure our website shows up when someone searches Google for what Zeffron offers.

Right now, if a founder in Birmingham types "build AI MVP fast" or "AI software company UK" into Google, zeffron.ai may not appear anywhere near the top of the results. This audit explains why and what we are going to do about it.

SEO has three parts:

Area	What it means in plain English	Who handles it
On-Page SEO	The words, titles, and labels on each page. Are they clear and specific enough for Google to understand what the page is about?	Marketing / Content
Technical SEO	The behind-the-scenes code — things like page speed, hidden tags Google reads, and whether Google can find and crawl the site properly.	Developer
Off-Page SEO	Links from other websites pointing to ours. Not covered in this audit.	Marketing / PR

This audit covers On-Page and Technical SEO — everything we can control and fix ourselves.

2. Overall Scores — What the Audit Tool Found

SEOptimer is an industry-standard tool that checks websites against Google best practices and gives grades across five areas. Here is what zeffron.ai scored on 18 March 2026:

A	B+	C	C-	B-
On-Page SEO	Performance	Usability	Social	Overall

What this means in plain English: The content and structure of our pages is decent — hence the A on On-Page SEO. But the experience for visitors (Usability), how our links look when shared (Social), and speed (which affects Performance) are all pulling the overall score down to a B-. A B- is not a failing grade, but it is costing us ranking positions we could easily recover with targeted fixes.

🎯 The Social score (C-) is the biggest gap and the easiest to fix. Adding a small block of code to each page means every link we share on LinkedIn or WhatsApp will show a proper image and description — instead of a blank, unformatted URL.

3. Page-by-Page Findings

Below is a breakdown of all 6 pages — what was found, what the actual values are, and what needs to change. The exact text shown in the tables was taken directly from the live site code.

Page 1: Homepage (zeffron.ai)

What Google currently sees on this page

Element	Current Value (taken directly from the site)	Status
Page Title	Top AI & Custom Software Company Midlands England | Zeffron	⚠️ Needs Work
Meta Description	Leading AI and Custom Software development company in Birmingham & Midlands. Specializing in Health Tech and Travel innovation. Expert engineering for complex challenges.	⚠️ Needs Work
Canonical Tag	Present and correctly set	✅ Good
Social Sharing Tags	Not found on this page	❌ Missing
Twitter / X Preview Tags	Not found on this page	❌ Missing
Structured Data (Schema)	Not found on this page	❌ Missing
SSL (Secure padlock)	Active — site uses HTTPS	✅ Good
Mobile Friendly	Yes — confirmed by audit tool	✅ Good
Robots.txt	Present — Google can access it	✅ Good
Sitemap	Present and submitted to Google	✅ Good
Analytics	Detected and active	✅ Good

What needs to change and why

Page Title: The title is what appears as the clickable blue headline in Google search results. Ours reads: "Top AI & Custom Software Company Midlands England | Zeffron". Two problems: it is slightly too long (Google cuts it off), and 'Midlands England' is not how people search - they type 'Birmingham'. Nobody searches 'Midlands England'.

> ✏️ Suggested title: "AI & MVP Development in Birmingham | Zeffron" — 52 characters, clean and searchable.

Meta Description: This is the short paragraph under the title in Google results. It does not affect ranking position, but it strongly affects whether someone clicks. Ours mentions Health Tech and Travel but says nothing about building an MVP in 10 days — our biggest selling point. There is also no call to action.

> ✏️ Suggested description: "Zeffron builds investor-ready AI products and MVPs in 10 days. Trusted by founders across the UK. Based in Birmingham. Book a free discovery call today."

Social Sharing Tags: When someone shares our website link on LinkedIn, WhatsApp, or Slack, those platforms look for hidden tags to know what image, title, and description to display. We have none of these tags on the homepage. This means every shared link appears as a plain, unlabelled URL with no image.

Structured Data: This is a hidden block of code that tells Google precisely what kind of business Zeffron is, where we are located, what we offer, and how to contact us. Without it, Google has to guess. With it, we become eligible for a knowledge panel in search results showing our logo, address, and phone number alongside our listing.

Page 2: Blog Index (zeffron.ai/blog.html)

Element	Current Value (taken directly from the site)	Status
Page Title	Blog | Zeffron - AI & Software Insights	⚠️ **Needs Work**
Meta Description	Insights, guides, and stories from Zeffron on AI development, software engineering, and building MVPs.	✅ **Good**
Canonical Tag	Not found on this page	❌ **Missing**
Social Sharing Tags	Not found on this page	❌ **Missing**
Twitter / X Preview Tags	Not found on this page	❌ **Missing**
Footer duplicate link	"Live Lab" appears twice in the footer. Quick Links	⚠️ **Needs Work**

Good news: This page has a meta description, which is more than most of our other pages do. The description is decent and does not need an urgent rewrite.

Page Title: "Blog | Zeffron - AI & Software Insights" is acceptable but could be more keyword-rich. Suggested: "AI & Software Development Blog | Zeffron" — adds searchable terms without changing the meaning.

Duplicate footer link: The footer Quick Links section lists "Live Lab" twice. This is a small but visible error that looks careless to visitors. It is a one-line fix for the developer.

Page 3: Blog Post: WhatsApp & AI Agents (zeffron.ai/blog/whatsapp-ai-agents.html)

Element	Current Value (taken directly from the site)	Status
Page Title	The Next Phase of Application Interfaces Might Be WhatsApp and AI Agents | Zeffron Blog	❌ **Problem**
Meta Description	Not found on this page	❌ **Missing**
Canonical Tag	Not found on this page	❌ **Missing**
Social Sharing Tags	Not found on this page	❌ **Missing**
Author Name	Listed as "Z / Zeffron" — no real name shown	⚠️ **Needs Work**
Links back to our services	None — article does not link to any Zeffron service page	⚠️ **Needs Work**

Title too long — At 88 characters, Google cuts this title off mid-sentence in search results. The recommended limit is around 60 characters. Suggested: "WhatsApp + AI Agents: The Next Application Interface | Zeffron" (62 characters).

No meta description — Without one, Google picks a random sentence from the article to show in search results – usually the wrong one. We should write a clear 1–2 sentence summary ourselves.

Author name — Google rewards content written by real, named people — especially on topics like technology and business. "Z / Zeffron" as the author weakens our credibility. A real first and last name, plus a 2-sentence bio, would make a meaningful difference to how Google scores the content.

No internal links — The article does not link back to any Zeffron service pages. Every blog post is an opportunity to direct readers toward our services. Two or three well-placed links per article can make a real difference.

Page 4: Blog Post: Custom AI Solutions 2026 (zeffron.ai/blog/custom-ai-solutions-2026.html)

Element	Current Value (taken directly from the site)	Status
Page Title	How Custom AI Solutions Are Redefining Business Efficiency and Customer Experience in 2026 | Zeffron Blog	❌ **Problem**
Meta Description	Not found on this page	❌ **Missing**
Canonical Tag	Not found on this page	❌ **Missing**
Social Sharing Tags	Not found on this page	❌ **Missing**
Author Name	Listed as "Z / Zeffron" — no real name shown	⚠️ **Needs Work**
External links	Links to third-party sites without proper tagging (Movate, Hypestudio)	⚠️ **Needs Work**

Title too long — At 103 characters, this is nearly double the recommended length. Google will truncate it heavily in search results. Suggested: "How Custom AI Is Redefining Business Efficiency in 2026 | Zeffron" (65 characters).

External links — When we link out to other websites in our articles, we pass a small SEO benefit to those sites. We should mark those links with rel="nofollow" to stop that. This is a developer fix that takes around 15 minutes.

Page 5: Live Lab (zeffron.ai/demos.html)

Element	Current Value (taken directly from the site)	Status
Page Title	Interactive Demos | Zeffron AI	⚠️ **Needs Work**
Meta Description	Not found on this page	❌ **Missing**
Canonical Tag	Not found on this page	❌ **Missing**
Social Sharing Tags	Not found on this page	❌ **Missing**
Intro text on page	Page goes straight into demos with no explanatory text	⚠️ **Needs Work**

A missed opportunity — The Live Lab is arguably the most impressive page on the site; it shows real, working AI. But Google cannot rank a page it cannot read. Right now, the page has almost no text, so Google does not know what the demos are about. Adding a short intro paragraph (3–4 sentences) per demo explaining what it does and who it is for would help significantly.

Page Title — "Interactive Demos | Zeffron AI" is short and does not describe what the demos cover. Suggested: "Live AI Demos — Supply Chain, CX & Ledger Tools | Zeffron."

Page 6: Careers (zeffron.ai/career.html)

Element	Current Value (taken directly from the site)	Status
Page Title	Build the Unknown.	❌ **Problem**
Meta Description	Not found on this page	❌ **Missing**
Canonical Tag	Not found on this page	❌ **Missing**
Social Sharing Tags	Not found on this page	❌ **Missing**
Actual job listings	None listed — page content is very thin	❌ **Problem**

🚨 The Careers page title is "Build the Unknown". — This is a brand slogan, not a page title. It will never appear in Google when someone searches for engineering or design jobs. This is the single easiest high-impact fix on the entire site.

Suggested title: "Careers at Zeffron | AI & Software Engineering Jobs Birmingham."

No job listings — The page currently shows no actual roles. Even listing one or two open positions (or an "expressions of interest" form) gives the page real content for Google to index and for candidates to respond to.

---

4. Site Speed: Why Our Pages Are Loading Too Slowly

Page speed is a ranking factor for Google — slower pages rank lower. It also directly affects whether visitors stay or leave. SEOptimer measured our site speed on 18 March 2026.

What was measured	In plain English	Our result	The target	Status
LCP — Largest Contentful Paint	How long a visitor waits to see the main content on screen	5.07 seconds	Under 2.5 sec	❌ **Problem**
CLS — Cumulative Layout Shift	Whether buttons and text jump around while the page loads	0.00	Under 0.1	✅ **Good**
INP — Interaction Response	How quickly the page responds when a visitor clicks or taps	Flagged for review	Under 200ms	⚠️ **Needs Work**
Total Page Size	The total amount of data a visitor's device has to download	5.12 MB	Under 2 MB	❌ **Problem**

LCP of 5.07 seconds is more than double the target. In practical terms, visitors on a typical phone connection are staring at a blank or partial screen for over 5 seconds. More than half of all visitors leave a site if it takes longer than 3 seconds to load. We are losing potential clients before they have even read a single word.

A page size of 5.12 MB is very large. Most well-optimised websites are under 2 MB. The most likely cause is large uncompressed image files. Compressing and resizing images alone could reduce the page size by 60–70% — which would significantly improve load time.

> ⚡ Fixing page speed is the single most impactful technical improvement we can make. Even bringing the load time from 5 seconds down to 2.5 seconds would likely improve our Google ranking and increase the percentage of visitors who stay on the site.

5. What We Need to Do — Full Action List

Every item below is based on the verified data from this audit. They are sorted by priority. Please go through this list and let us agree on who owns each item and set a completion date before the end of this session.

📋 Please fill in the Owner and Target Date columns during your review. Items marked Critical should be completed within the next sprint (within 2 weeks).

Priority	Page	What needs to happen — in plain English	Who does it	Time needed	Owner	Target date
🔴 Critical	All pages	Add social sharing tags (OG tags) — makes every link look professional when shared on LinkedIn, WhatsApp, or Slack	Developer	1–2 hours		
🔴 Critical	All pages	Add structured data (Schema) — tells Google exactly what kind of business Zeffron is, where we are, and what we offer	Developer	2–3 hours		
🔴 Critical	Homepage	Rewrite the page title to "AI & MVP Development in Birmingham | Zeffron".	Developer	10 minutes		
🔴 Critical	Blog Post 1	Shorten the page title — currently 88 characters and being cut off in Google results	Developer	10 minutes		
🔴 Critical	Blog Post 2	Shorten the page title — currently 103 characters, and is being cut off in Google results	Developer	10 minutes		
🔴 Critical	Careers	Change the page title from "Build the Unknown" to "Careers at Zeffron | AI & Software Engineering Jobs Birmingham".	Developer	10 minutes		
🟠 High	Homepage	Rewrite the meta description to lead with the 10-day MVP USP and include a call to action	Marketing	20 minutes		
🟠 High	Blog Post 1	Write a meta description — 1–2 sentences summarising what the article is about	Marketing	15 minutes		
🟠 High	Blog Post 2	Write a meta description — 1–2 sentences summarising what the article is about	Marketing	15 minutes		

Priority	Page	What needs to happen — in plain English	Who does it	Time needed	Owner	Target date
🟠 High	Live Lab	Write a meta description explaining what the demos are and who they are for	Marketing	20 minutes		
🟠 High	Careers	Write a meta description for the Careers page	Marketing	15 minutes		
🟠 High	5 pages	Add canonical tags to Blog Post 1, Blog Post 2, Blog Index, Live Lab, and Careers pages	Developer	30 minutes		
🟠 High	All pages	Add Twitter / X preview card tags to all pages	Developer	30 minutes		
🟡 Medium	Site-wide	Fix page load speed: compress images and reduce total page size from 5.12 MB to under 2 MB	Developer	Half day		
🟡 Medium	Blog posts	Replace "Z / Zeffron" author with a real named author and a short 2–3 sentence bio	Marketing	30 minutes		
🟡 Medium	Blog Post 2	Mark outbound links to Movate and Hypestudio as 'nofollow' so we keep our SEO value	Developer	15 minutes		
🟡 Medium	Blog posts	Add 2–3 links from each blog article back to a relevant Zeffron service page	Marketing	30 minutes		
🟡 Medium	Live Lab	Add a short intro paragraph per demo explaining what it does and who it is for	Marketing	30 minutes		
🟡 Medium	Blog Index	Remove the duplicate "Live Lab" link from the footer. Quick Links	Developer	5 minutes		
🟢 Low	All pages	Update the footer copyright from 2024 to 2026	Developer	5 minutes		
🟢 Low	Careers	Add at least one real job listing or an expression of interest form	Marketing / HR	1–2 hours		
🟢 Low	Careers	Add the Careers page link to the main site navigation	Developer	15 minutes		

6. Quick Wins — The Five Fixes to Do This Week

If we can only focus on a small number of changes right now, these five will make the biggest visible difference in the least amount of time:

Fix	Time needed	Why it matters right now
Add social sharing tags (OG tags) to all pages	1–2 hours (developer)	Every link we share on LinkedIn or WhatsApp will immediately show a proper image and description. This is the most visible gap on the site and one of the easiest to fix.
Fix the Careers page title	10 minutes (developer)	Currently the page cannot rank for any job-related search. One line of code and it becomes findable overnight.
Shorten the two blog post titles	20 minutes total (developer)	Both are being cut off in Google search results right now. A quick fix that makes both articles display properly.
Write the four missing meta descriptions	1 hour (marketing)	Controls what text Google shows under our links in search results. Without them, Google picks random sentences from the page — almost always the wrong choice.
Update footer copyright from 2024 to 2026	5 minutes (developer)	A small but visible detail. Visitors and potential clients notice when a site looks unmaintained.

📌 These five fixes combined take under 3 hours of total effort across the team — and they address the most visible, most immediately impactful issues on the site.

End of Report

Zeffron Systems | March 2026 | Internal Use Only
