ABOUT ZEFFRON

BODY

Zeffron is a modern product and AI studio built for founders who need to move fast. We combine engineering excellence with rapid execution, delivering intelligent product solutions that can scale, ready to pitch and earn. We believe good software is only good if it ships, and it only matters if it works for the people using it. Many times, great ideas get killed by slow, expensive, or indifferent technical teams, and that can change when you partner with us.

WHAT DO WE DO?

Zeffron works with visionary founders who have the vision and are aware of their market value to build a customised AI-focused sprint product model so you can build and ship quickly. Great ideas deserve more

than a backlog and that is why you do not need to either wait for months hiring developers or spend six figures building the wrong product. You have access to an actual working product beyond your concept that investors can fund and users can love.

WHO DO WE BUILD FOR?

1. Non-technical founders ready to validate their first AI product
2. Startups that need to integrate AI into existing tools and workflows
3. Scaling businesses that want a fractional technical team, on demand

---

FEATURED PRODUCTS WE HAVE LAUNCHED (Excluded)

These are some of the problems we have solved with our engineering team to ship the products with AI

01. TrendMind

Industry: Content

TAGLINE

High performance LinkedIn content at scale, powered by AI.

CHALLENGE

A high-performing founder with no technical capacity and no investor-ready prototype which stalled the fundraising efforts.

WHAT WE BUILT

An AI-powered content generator, scheduler, and analytics platform which was shipped in a 10-day sprint and ready to demo to angels on day 11.

RESULTS

£20k Angel interest secured

1,000+ Early users within 30 days

70% Lower build cost vs traditional agencies

"Zeffron didn't just build a product; they built my confidence. — Founder, TrendMind"

---

02. WhisperCoach

Industry: Sales Tech

TAGLINE

Real-time AI coaching assistant for high-velocity sales teams.

CHALLENGE

The team needed a fast and investor-ready prototype that could demonstrate complex real-time capabilities without a full build budget.

WHAT WE BUILT

A high-fidelity, clickable AI prototype simulating real-time feedback loops and analytics dashboards. This concept was validated before a single line of production code was written.

RESULTS

6 Weeks To first enterprise pilot conversation

75% Faster sales team ramp-up

100% Concept validated without production code

"Precision and speed. Zeffron helped us land our first enterprise conversation. — Co-Founder, WhisperCoach"

---

03. AlphaCruise

Industry: Travel Tech

TAGLINE

Modern booking automation for the digital-first travel era

CHALLENGE

A travel brand relying on manual processes, with no internal tech team and no roadmap for digital transformation.

WHAT WE BUILT

A full booking platform with real-time API integrations and a custom admin portal all delivered end-to-end, from architecture to deployment.

RESULTS

60% Reduction in manual operations

120+ Beta users onboarded

45% Revenue growth post-launch

"Tech used to be a barrier. Now it's our edge. — Founder, AlphaCruise"

---

04. Techcify

Industry: EdTech

TAGLINE

A leading Edtech platform powered by Zeffron.

WHAT WE BUILT

An adaptive learning engine, comprehensive analytics dashboard, and smart question generation system engineered to scale to thousands of users with zero downtime.

RESULTS

95% User pass rate

1,000s Active learners

0% Downtime at scale

HOW WE CAN WORK WITH YOU

SECTION INTRO

Here are four ways we can work with you from your first idea to a full AI customisation project

01. Rapid AI Product Development

WHO IT'S FOR

Non-technical founders, early-stage startups, and entrepreneurs who need to move from ideation to an investable product launch fast.

WHAT YOU GET

- Product ideation and scoping session
- UX and UI design with a clickable, demo-ready prototype
- Full AI product build (web or mobile)
- Hosting, deployment, and go-live support
- One week of post-launch technical support

---

02. Custom AI Solutions

WHO IT'S FOR

SMEs, scaleups, and brands that want AI embedded in their operations innovation not as an afterthought.

WHAT YOU GET

- AI strategy consulting and opportunity mapping
- Custom AI model and tooling development
- CRM and ERP integrations
- Data pipelines and performance optimisation
- Ongoing AI maintenance and iteration

---

03. Technical Team On Demand

WHO IT'S FOR

Founders who need senior technical capability without the overhead cost of a full-time team

WHAT YOU GET

- Full-stack developers and AI/ML engineers

- UI/UX designers and product thinkers
- Technical co-founder as a service
- Feature development, scaling, and roadmap execution

---

04. Investor and Pitch Readiness

WHO IT'S FOR

Founders preparing for their first round or their next one.

WHAT YOU GET

- Live AI product demo and technical walkthrough
- Business model and GTM strategy documentation
- Investor pitch deck (co-developed with your team)
- Technical documentation for due diligence

WHY BUSINESSES CHOOSE ZEFFRON

HEADLINE

We do not just build software, we engineer intelligent systems to deliver real business agencies.

BODY

Most agencies optimise for billable hours. Freelancers optimise for what's in the brief. Zeffron optimises for what's in your business model. We have been here before and our engineers have shipped real products under real founder pressure so we know what investors look for because we have built things that raised.We own the outcome with your products and do not disappear after your build.

WHAT SETS US APART:

- Expert AI and ML engineers embedded from day one
- Excellent delivery with no short cuts
- End-to-end ownership from whiteboard to launch
- Transparent, founder-first communication throughout
- Proven results across industries
- Data-driven builds

Let’s get to work with a call first to discuss your challenges

Tell us what you are building and we will take it from there.

FORM COPY — SCOPING TOGGLE

TOGGLE LABEL: I want to scope out:

OPTION A: A New Project

OPTION B: An Existing Project

(Design note: We can replicate the Kitrum toggle pattern — two pill buttons or similar, one selected state. "A New Project" selected by default. This is a UX-level qualifier)

FORM FIELDS

IF "**A NEW PROJECT"** IS SELECTED

– Your name

– Email address

– Company name (if any)

– Describe your project: what are you building and who is it for?

– What type of project is this? [selectors: AI Product Build / Custom AI Integration / Website or Platform / Not sure yet]

– Upload files(briefs, wireframes, pitch decks are welcome) : there should be the option of drag and drop or browse/select files

I agree to the Privacy and Terms

I would like to be updated on Zeffron’s latest products, event announcements, and thought leadership.

IF "**AN EXISTING PROJECT**" IS SELECTED

– Your name

– Email address

– Company name

– Tell us about what you have so far(what was built, how, and what the problem is now)

– What type of help do you need? [selector: Production Hardening / Security Review / AI Integration / Ongoing Development / Not sure yet]

– Link to your current build or staging environment (optional)

– Upload files

CTA Button: Send My Brief

BELOW THE BUTTON

We respond within one to three business days. If your project is time-sensitive, mark it in your message and we will prioritise accordingly.

A FREE AUDIT FOR YOU

Not sure where AI Fits in your Business? Find out in less than 60 minutes.

We offer a free, no-obligation AI Audit for businesses that are curious about AI but do not know where to start or have already started and want to know if they are doing it right.

WHO THIS IS FOR

This is for business owners, operators, and founding teams — not necessarily technical. If you have questions about AI and want straight answers from engineers who build it, this call is for you.

Book Your Free AI Audit Call [Link to Cal.com booking page]

Free. No commitment required.

BLOG

The blog action should have two sections once opened:
Insights for founders and insights for technical teams

We built Zeffron because we watched too many good ideas get killed by slow, expensive, or indifferent technical teams.

We are a product and AI studio for founders. Our team combines engineering precision with the urgency of a startup — because we have been in one. We work in sprints, we ship fast, and we care about what happens after launch.

We believe the best software is built when technical excellence and founder ambition are in the same room at the same time. That is what we bring.

COMMON QUESTIONS YOU MIGHT HAVE

Do you have any of these concerns? We have some answers here for you

Q1: I'm not technical at all. Can I still work with Zeffron?

Yes — and frankly, most of our best engagements are with non-technical founders. You do not need to understand code, architecture, or infrastructure to work with us. What you need is a clear problem, a target user, and a willingness to make decisions fast. We handle everything else and we will explain the technical parts in plain language, flag the trade-offs that matter to your business, and make sure you feel in control throughout the build.

Q2 How is Zeffron different from hiring a freelancer or a larger agency?

Freelancers are affordable but solo. They build what you ask for, and if you ask for the wrong thing, they build that too. Larger agencies are thorough but slow, you will wait months for a kickoff, pay for project managers, and still not own the product thinking. Zeffron sits in neither category. We are a lean senior team that moves at startup speed. We will tell you when a feature is a distraction, when a simpler architecture is the smarter bet, and when you are ready to raise before you think you are.

Q3 What if I need changes after the build days are up?

The first week after launch is included in every sprint, if something is not right, we fix it. Beyond that, most founders who want to keep building move onto a monthly retainer with us, where we act as their ongoing technical team. Some projects roll directly from a sprint into a Custom AI build or a fractional team arrangement depending on what growth looks like. We will always be transparent about what makes sense for your stage before recommending anything.

Q4 I have an idea but I am not sure it is ready. How developed does my concept need to be before we talk?

Not very. What matters is not the polish of your brief, it is whether the problem you are solving is real. If you can describe who your user is, what they are struggling with today, and roughly what you imagine the solution looks like, that is enough to start. Our discovery process is specifically designed to turn loose thinking into a sharp, scoped product plan.

Q5 Do I own the code and the intellectual property after the build?

Completely and contractually. Everything we build for you belongs to you: the code, the design, the data architecture, all of it. We do not retain licensing rights, we do not keep back-end access after handover, and we do not use your product as a portfolio asset without your explicit permission.

Q6 Can you help me get investor-ready — not just build the product?

Yes. Investor readiness is one of our four core services for exactly this reason. We have seen too many founders walk into fundraising conversations with a strong product and a weak story — or worse, a strong story and a product that falls apart under technical scrutiny. Our Investor and Pitch Readiness package includes a live product demo, technical documentation for due diligence, a co-developed pitch deck, and a GTM plan. We can also join investor calls to answer technical questions directly if that would be useful. Getting funded is not just about having a good product. It is about being able to show it clearly, defend it confidently, and frame it in a language investors already trust.

Q7: I already have something built but it was put together quickly and I am not sure it is production-ready. Can you help?

Yes, and this is one of the most common situations we work with. A lot of founders today are using AI-assisted tools to ship a first version fast — which is smart for validating an idea, but those builds were not designed to scale, handle real user traffic, or pass a security review. What you have is a starting point, not a finished product. We come in, audit what exists, identify where it breaks under pressure, fix the underlying architecture, and harden it for production. This includes security vulnerabilities, data handling, performance under load, and making the codebase something a future engineering team can actually work with. You keep the momentum you have built. We make it solid enough to put in front of real users, enterprise clients, or investors without it becoming a liability.

Still have a question we have not answered here?

Book a Discovery Call — and ask us directly. (embed the link here)

If you are not sure your business is ready for a full AI build? Book a free call instead. It is a 45-minute conversation with our team — no commitment, no sales pitch, just clarity.
